CRO Tracker, supporting R&D outsourcing

Industry-Specific Search Engine for Outsourcing

CRO Tracker is the search engine from Bio2Business specifically built for R&D outsourcing. In just a few clicks biotech and pharma executives can search and select potential CRO partners quickly and accurately. Covering all areas of R&D from discovery to late clinical development CRO Tracker will be a valuable business intelligence tool to support your outsourcing activities.

Search: Find outsourcing services quickly and accurately with our powerful search function

Those looking to source services can find potential partners quickly and accurately using one of three different search options as follows:

Keyword Searching – use any keyword or combination of keywords to quickly search the CRO Tracker profiles. Search results are sorted using a ranking system designed to elevate those hits most closely matching your search query.

Basic Filter Search – select keywords from drop down pick lists from 9 fields including company type, disease area, chemistries, capacity, company name, location, disease area and phase of development. This method of searching delivers a more qualitative approach.

Advanced Filter Search – select multiple keywords from multiple fields. Allows the end user to build complex search queries.

Select: Delivering Appropriate Information to Support Your Search & Selection

Participating contract service organisations are invited to complete a detailed company profile which is then published on CRO Tracker. Each profile consists of 26 fields including standard information such as company name, location, number of staff etc to more “outsourcing specific” information such as audit history, company type (service type), phase of development, disease area, chemistry expertise, track record, capabilities, limitations, detailed information and principal contact. This content reflects the information you require to support your outsourcing decision making and will help you select the appropriate CROs that can support your business.

CRO Tracker Home	1. Ubichem plc (120) Text search matches radiolabelling
Advanced Search	2. Quobient Bioresearch (115) Text search matches radiolabelling
Saved Search	3. Pharmatory Ltd (75) Text search matches radiolabelling
Logout	4. RenaSci (75) Text search matches radiolabelling

Bio2Business Videos	10. Sai Advantium Pharma Ltd (75) Text search matches radiolabelling

Contact: Make contact with the relevant CRO contact, quickly and effectively

Each CRO profile contains a “Request for Information” button that will deliver an email direct from you (the end user) to the appropriate business development contact in the contract service organisation. This ensures you reach the appropriate CRO contact quickly and effectively. Principal contact telephone numbers are also listed in the CRO company profile

Access & Charges

CRO Tracker is free of charge to the end user (typically biotech and pharma executives looking to source contract services). Our business model is to generate revenue through advertising.

To start searching simply go to www.bio2business.com and register for CRO Tracker. You can start searching immediately using the links provided on our home page. CRO Tracker is available to any enduser to search and connect with participating CROs. Full access to CRO profiles will be granted to eligible R&D professionals at no additional charge (see FAQ for details). For further information please contact us or visit www.bio2business.com
